ANTIGENIX AMERICA, INC.

REV: 6/11-2

PRODUCT INFORMATION SUMMARY

Human sRANKLProduct Number RHF740CKX"SUPER X" ELISA Kit5 Plate Kit (5 x 96 tests)
Product Number RHF740CKX2 (2 x 96 tests)
RHF740CKX1 (single plate)

Items Provided:

PRE-COATED ELISA Plates(1,2, or 5 plates)Biotin-Labeled tracer25.0 ug or 0.5 mL (see vial)Antigen Standard1.0 ug or 2.0 ugStreptavidin-HRP0.5 mLTMB Substrate25 mL x 2 (15.0 mL or 10 mL)Wash Buffer Concentrate125 mL (20X); or 50 mL or 25 mL

DESCRIPTION:

Human sRANKL **SUPER X ELISA Kit** provides single, two or five **PRE-COATED** microplates (coated with antigen affinity purified capture antibody stabilized with our proprietary ELISA coating/blocking reagent. A biotin labeled tracer antibody, antigen standard, HRP developing reagents and wash buffer are included.

Reactivity with various sample types, including serum/plasma samples, is evaluated by customer.

Note: Reconstitute components only when ready to run assay.

TRACER ANTIBODY:

Provided as 25 ug (lyophilized)or as 0.5 mL liquid

@ 50.0 ug/mL (**see vial**) of Biotin labeled, antigen-affinity purified antibody, additive-free. Reconstitute the 25 ug (lyophilized vial) in 500 uL sterile water **containing 0.1% BSA**. (FREEZE aliquots for long-term storage). -

******For liquid vial store refrigerated only (contains preservative) ******.

STANDARD: Provided as 1.0 ug or 2.0 ug (see vial) of recombinant Human sRANKL. Quick-spin and reconstitute in distilled water (pH 8.0) - concentration approx. 0.1 mg/mL. Further dilutions can be made in 0.05% Tween-20, 0.1% BSA in PBS.

DEVELOPING REAGENTS:

- Streptavidin-HRP (S100180CX) 0.5 mL store @ -20 Deg. C.
- TMB Substrate Solutions Part A and Part B (25.0 mL or

15.0 mL each) cat # ES200CX

- Wash Buffer Concentrate (20X concentrate) Mix 1 volume of wash buffer with 19 volumes of distilled water. Stable for one month @ 4 Deg. C. once mixed to working volume. Store refrigerated.
- **HANDLING/ STORAGE:** Reconstitute reagents when ready to build ELISA assay. Biotin Tracer Antibody provided as 25.0 ug lyophilized can be stored for approximately one month at 4 Degrees C. Or store **frozen** at -20 Degrees C. for up to 6 months.

Biotin tracer antibody provided as 0.5 mL liquid -STORE refrigerated only - contains preservative.

Standard (rec. sRANKL) can be stored in liquid state (@ 4 Deg. C.) For up to one week, or store **frozen**, **with addition of 0.1% BSA**, at -20 Deg. C. for up to 2 months. AVOID repeat freeze-thaw. Precoated ELISA plates should be stored in sealed plastic bag with desiccant pack, and are stable until expiration date on kit..

Store Streptavidin-HRP (S100180CX) @ -20 Deg. C.

Store TMB solutions and wash buffer concentrate at 4 Deg. C. CAUTION: Substrate Solution B contains 20% acetone. FLAMMABLE. Keep away from sources of heat or flame.

MATERIALS RECOMMENDED:

Tween -20. BSA (ELISA grade only, protease-free) Dubelco's PBS (10X) PBS: Dilute to 1XPBS in sterile water **Diluent**: use : 0.05% Tween-20, 0.1% BSA in PBS 2N Sulfuric acid (stop solution).

PLATE PREPARATION:

Plates are **pre-coated** with capture antibody and blocked/stabilized with ANTIGENIX proprietary ELISA coating stabilizer (EA150) and are **ready to use**!

Store plates refrigerated (@ 4 Deg. C.) in sealed plastic bags with desiccant pack. Plates can be stored until expiration date on kit box.

PROTOCOL:

STANDARD/SAMPLE: Dilute **a portion of the** standard (store unused standard in aliquots, high concentration, frozen -20 Deg. C. with addition of 0.1% BSA) from **2.0 ng/mL** to zero in diluent -serial dilution Immediately add 100 uL of standard or sample to each well in duplicate. **Incubate** at room temp. for **1 hour**.

DETECTION: Aspirate and wash plate 4 times. **Dilute** detection (Biotin Tracer) antibody in diluent to concentration of **0.10 ug/mL**. Add 100 uL per well. **Incubate** at room temperature

for 30 minutes.

STREPTAVIDIN-HRP: Aspirate and wash plate 4 times. Dilute Streptavidin-HRP conjugate approx. 1:2,000 in diluent (PBS with 0.1% BSA). (May need to optimize) Add 100 uL per wellincubate 30 minutes at room temperature.

SUBSTRATE: **Prepare substrate solution** no more than 15 minutes before last incubation of assay: Mix one part TMB Solution A with one part TMB Solution B in a clean container. If, upon mixing, TMB solution turns blue - TMB solution is **contaminated**-**DO NOT USE.** Use mixed substrate solution **WITHIN 2 Hours, and AVOID DIRECT LIGHT.**

Aspirate and wash plate 4 times. Note: Wash steps are critical! Add 100 uL substrate solution to each well. Incubate at room temp. for color development. Add 100 uL of Stop solution (2N Sulfuric Acid) after 10-15 minutes to stop color development gently tap plate to mix. Read plate at 450 nm within 30 minutes of addition of stop solution.

NOTE: reliable standard curves are obtained when O.D. readings do not exceed 0.25 units for the zero standard concentration, or 1.6 units for the highest standard concentration.

RESEARCH USE ONLY -NOT For DIAGNOSTIC USE

X-REACTIVITY DATA:

Minimal (1%) X-Reactivity was observed with the following factors @ 40-50 ng/mL:

Human: TWEAK; TNF alpha; sRANKR

No measurable X-reactivity was observed with the following:

Human: sTRAIL; IL-20; sCD40L; Eotaxin-3; TNF Beta; sFasL; 4-1BBL

Rat and Mouse: sRANKL; TNF alpha
