PRODUCT INFORMATION SUMMARY

Murine M-CSF

| | | | |
|-----------------|----------------|-----------|-------|
| Purified Factor | Product Number | RC444055B | 10 ug |
| | | RC444055A | 2 ug |

DESCRIPTION:

Mouse Macrophage-Colony Stimulating Factor (M-CSF) is a growth factor for monocytes and macrophages. Mouse M-CSF is produced by several cell types including endothelial cells, fibroblasts, and macrophages. Murine M-CSF has molecular weight of 18.2 kDa, and 156 aa. residues.

SOURCE: E. Coli, sterile-filtered, lyophilized from Tris, pH 8.0
Purity > 98% by HPLC analysis
Endotoxin < 0.1 ng per ug Murine M-CSF

BIOLOGICAL ACTIVITY:

Fully biologically active when compared to standards.

Specific activity of 1.0 ng/mL, as determined by dose dependent stimulation of murine M-NFS-60 cells corresponding to specific activity of 1×10^6 units/mg.

HANDLING AND STORAGE:

Purified Murine M-CSF factor is provided lyophilized from Tris/Saline, pH 8.0., and free of additives. Store lyophilized, at -20° C. Reconstitute with **sterile or distilled water** to a concentration of 100 ug/mL, then further dilute in other buffered solutions. Store small aliquots at -20° C for long-term storage, at high concentration.

Microcentrifuge before reconstitution. Because ANTIGENIX factors are provided without carrier proteins like sucrose or BSA, the small quantities of lyophilized protein can adhere to the sides and cap of the vial during manufacture. **Before opening the vial**, we recommend microcentrifuging for 30 seconds to spin-down all material.

WARRANTY:

Products sold hereunder are warranted only to conform to the quantity and contents stated on the label at the time of delivery to the customer. There are no warranties, expressed or implied, which extend beyond the description on the label of the product.

RESEARCH USE ONLY -NOT for DRUG USE
